

DISCOVER

The new D-Series from Dell. It's more than you asked for. It's everything you need. The D-Series line of notebooks will change the way you work. Forever.

DIFFERENT

Mobility that's different. Oh, so different. Mobile computing has forever changed. And guess what? You were the inspiration. The D-Series Latitude Notebooks from Dell featuring Intel® Centrino™ mobile technology are the answer to all of your wireless needs. Now and in the future.

Imagine being connected to printers and handhelds without being tied down to wires? Imagine having a computer that knows when it's you and when it's not? Imagine owning a notebook that's an architectural achievement? We did.

The D-Series offers forward-thinking technology, security and design – as well as everything you've grown to expect from Dell. Just like the C-Series, this new line delivers commonality, compatibility and consistency.

Check out the D-Series from Dell. It's all new and incredibly affordable. And all ready to be discovered by you.

DECKED OUT

Extraordinary extras. Options and options complement the D-Series. A wide range of add-ons make one of the best notebooks on the market even better.

Unique is the D/View notebook stand. Easily, you can raise your notebook LCD to the eye-level equivalence of a desktop. Plug in a keyboard and mouse and you may just forget it's a notebook. With no monitor required, it's space-saving and energy-efficient.

Also available for purchase are the D/Dock docking station, the D/Port port replicator, the D/Bay external media bay, the D/Monitor stand and new AC adapters. All created exclusively for the D-Series.

DISCIPLINED

Redefining security. Security has a new meaning. The D-Series is a safer way to store information. And a surer way to prevent theft.

Integrated into most D-Series notebooks is the internal Smart Card Reader. It's a low-cost security solution that's upgradable and scalable. It offers the option to require a two-factor access authentication – something you know (your password) and something you have (your Smart Card).

Other forms of authentication are also included in the D-Series. Passwords can be required for the primary user to boot up and for the administration to service and repair the computer. Comforting to know, if the hard disk is ever stolen, it's password-protected.

Also, a Dock Security lock slot and a Media Bay lock easily secure it to its station. So you'll find your notebook exactly where you left it.

Intricately designed. Go ahead and judge a D-Series notebook by its cover. From the easy-to-use latch to the side-exiting media bay, it's an attractive statement of functionality.

At a glance, you can view your computer's current state of operation. Power buttons are backlit, and LED indicators show capital, number and scroll locks. Status bars indicate battery level and Bluetooth activity. And, a new user interface features a convenient audio volume up/down/mute button.

Also eye-catching is the metallic chassis. Accented in Midnight Gray, the D-Series comes in Moonlight Silver and Ion Silver. And with quieter buttons, keys, latches and fan, the D-Series notebooks are easy on the ears, too.

Evolved technology. The D-Series far exceeds most of today's technology. It gives you the freedom to work exactly the way you want. It liberates you from wires, introduces new software and so much more.

In every D-Series notebook, innovative wireless technology comes standard – which is anything but standard. An internal antenna allows you to stay connected farther and farther away from your system. And, it can be disabled by simply hitting a function key.

The optional TrueMobile™ Bluetooth card lets you hook up with other Bluetooth-enabled printers, notebooks and handhelds via short range radio signals. So, if you choose, the only wire you'll ever really need is the power cord. But you won't need it much. The ExpressCharge feature enables you to fast charge your batteries in about an hour. Or, you can swap the primary battery without ever shutting down or plugging in.

With Quickset Utility Software, you can update and change settings right on your desktop and without fussing with the control panel. Skip a step by easily toggling back and forth between presentation modes and volume, brightness, wireless and icon settings, and battery optimization controls.

And that's just for starters. There are more ports, more expansion slots and more processing power.

DYNAMIC

Intel® Centrino™ mobile technology and Dell keep the D-Series full of life.

And not just battery life. While Intel Centrino mobile technology enables notebooks to operate on less power, the ground-breaking technology was designed to excel in all areas of mobility, too. It's a key feature in the D-Series notebooks by contributing to their slimmer and lighter form, enhancing wireless capabilities and providing outstanding performance headroom. Dell and Intel Centrino mobile technology elevate the D-Series into a technology category all their own.
